***Formal Matters***

The examiner had allowed claims 4, 7 and 11 in the last Office action. However, after further consideration, the examiner should have also rejected claim 7. This rejection is presented below and the Office action is non-final.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 7 is rejected under 35 U.S.C. 102(b) as being anticipated by Kasevich et al. (5,057,106). Kasevich et al. disclose:

In a balloon catheter suitable for use in treating diseased tissue of a patient, wherein said balloon catheter comprises a catheter body, an inflatable balloon surrounding said catheter body, an omniirectional antenna, and a microwave feedline for forwarding microwave energy to said omniirectional antenna, wherein in use (1) said catheter with said balloon in a deflated state may first be positioned so that said antenna is aligned with said patient's diseased tissue and (2) said balloon may then be inflated so that an exterior surface of said balloon presses said diseased tissue while said antenna transmits radiant energy to said diseased tissue thereby to effect the heating of said diseased tissue, both said microwave feedline and said antenna being located entirely-outside of said balloon with said antenna being longitudinally physically

situated in cooperative relationship with said exterior surface of said balloon, thereby in use causing said inflated balloon pressing said diseased tissue to result in said antenna being in direct contact with irradiated tissue of said patient;

the improvement wherein:

said external omnidirectional antenna comprises a metallic helical structure surrounding said longitudinal external surface of said balloon (col. 5, lines 28-38 and col. 7, lines 57-62).

Note the antenna inherently comprises a metallic helical structure.

***Allowable Subject Matter***

Claims 4, 5 and 11 are allowed.
